

Blind rivets fasten joints without access to the reverse side of the sheet metal. DMI #43 painted stainless steel rivets are manufactured of corrosion resistant 302 / 304 stainless steel. DMI SS rivets exceed the corrosion resistant standards put forth in Florida Building Code section 1506.6. DMI also offers unpainted #43 rivets in 304 stainless steel, 316 stainless steel and copper/brass.

Rivets should be predrilled with a #30 drill bit. To install insert rivets in the retracting jaws in the setting tool pull the mandrel head into the rivets body on the reverse side until the mandrel breaks. The high clinch action pull the parts together for a tight, vibration resistant hold.

Rivet Sizing / Grip range 

Rivet length is measured to the end of the rivet body. A #43 rivet has a 1/8" diameter body with a 5/16" body length. Its grip range is material from .12" to .187" ( 1/8" - 3/16").

**#43 PAINTED RIVETS**
